

FUEL (DIESEL)

DIESEL PARTICULATE FILTER (DPF) CLEANER PLUS

Wynn's® DPF Cleaner Plus is a professional fuel treatment specially formulated to remove soot from the diesel particulate filter and clean the exhaust system. Diesel particulate filters trap and store soot that forms in the combustion process and exits the combustion chamber with exhaust gas. This exceptional product cleans the diesel particulate filter without engine teardown. It contains both an oxidizing combustion catalyst and a diesel detergent package to reduce carbon deposits and soot throughout the combustion and exhaust system. Use Wynn's® DPF Cleaner Plus with all diesel filters and aftertreatment systems.

FEATURES AND BENEFITS:

- ✓ Cleans DPF Without Engine Teardown
- ✓ Reduces Carbon Deposits and Soot Throughout the Combustion and Exhaust System
- ✓ Compatible with All Diesel Filters and Aftertreatment Systems
- ✓ Especially Suited for City Driving Cycles
- ✓ Reduces High Maintenance Costs Associated with Manual DPF Regeneration

ADD TO FUEL TANK ONLY

SPECIFICATIONS:

Product No: ZW26911

Net Weight: 11 FL OZ (325 mL)

Case Quantity: 24 Each

FUEL (DIESEL)

DIESEL PARTICULATE FILTER (DPF) CLEANER PLUS

THE PROBLEM:

- Diesel engines are uniquely prone to form soot during combustion. Exhaust gas carries the soot into the diesel particulate filter, where it may build up and impede the flow of exhaust gas.
- A clogged diesel particulate filter creates back pressure that will lead to more frequent regeneration, loss of power, reduced fuel economy, filter damage, and engine damage over time.
- Soot buildup in the diesel particulate filter (DPF) may begin to release particulates into the exhaust stream and promote black smoke.
- Manually regenerating the blocked soot filter adds to the maintenance cost of the vehicle. Dismantling and manually cleaning a blocked diesel soot filter is difficult and time-consuming.

THE SOLUTION:

- Wynn's® Diesel Particulate Filter (DPF) Cleaner Plus is proven to reduce soot load on diesel particulate filters in one application. Added to the fuel tank it cleans the filter, allowing the emissions system to work more effectively.
- Wynn's® DPF Cleaner Plus improves vehicle performance by restoring gas flow through the exhaust system, allowing the combustion chambers to clear with each exhaust stroke.
- Wynn's® DPF Cleaner Plus is the solution to harmful particulate emissions generated by diesel engines.
- Wynn's® DPF Cleaner Plus reduces or eliminates the need for manual regeneration and removes soot from the filter with no dismantling necessary.

Application and Treat Rate: Treats up to 15 gallons of fuel.

Directions: Pour into fuel tank.
